<b>LIST OF MANUFACTURERS WHO PARTICIPATED IN THIS SURVEY .....</b>	<b>26</b>

# Growing RoHS compliance in Asia's electronics sector

Survey shows 93 percent of manufacturers in Greater China and South Korea will be RoHS-compliant by July 2006.

Manufacturers in mainland China, Taiwan, Hong Kong and South Korea exporting to Europe are bent on beating the July 1, 2006 deadline set by the European Union (EU) for their products to comply with the directive on the Restriction of Certain Hazardous Substances (RoHS). This directive is closely linked with the Waste, Electrical and Electronic Equipment (WEEE) directive that took effect last August 2005.

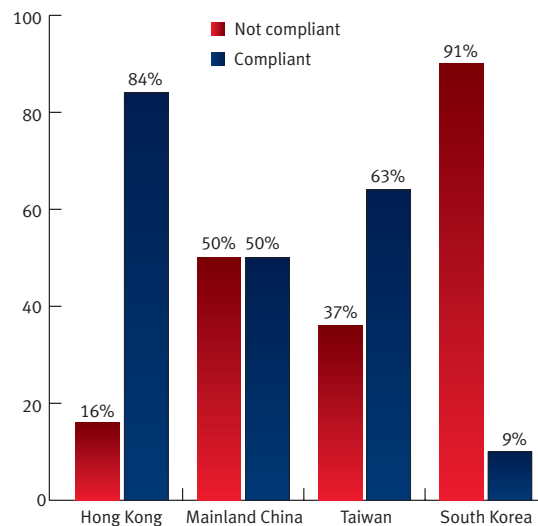

In the September 2005 survey of 359 manufacturers that are exporting or plan to export electronic components, consumer electronics, and telecom and computer products to Europe, Global Sources found out that 51 percent are already RoHS-compliant. Of the remaining manufacturers, 86 percent plan to comply by end of June 2006, raising the percentage of compliant manufacturers to 93.3 percent by the time the directive takes effect. The charts and graphs on the following pages highlight the state of compliance of key segments of the electronics and components industry in the aforementioned areas.

Based on China's Customs Statistics, mainland China's export value would have reached \$400 billion of electromechanical products by late 2005. Statistics from the China Chamber of Commerce for Import and Export of Machinery and Electronic Products show the two directives, based on 2005's trading volume, will affect \$5.6 billion worth of the mainland's exports to the EU.

As for Taiwan, its export of electrical and electronic equipment and products to the EU is estimated at \$10 billion on the average. The Industrial Development Bureau of Taiwan's Ministry of Economic Affairs has announced support for Taiwan manufacturers who are coping with issues regarding the RoHS directive.

### RoHS COMPLIANCE BY REGION

*Is your company RoHS-compliant?*

As of September 2005, the majority of the export-oriented manufacturers in Hong Kong and Taiwan are RoHS compliant, with the remaining non-compliant companies planning to shift to lead-free manufacturing before the July 2006 deadline.

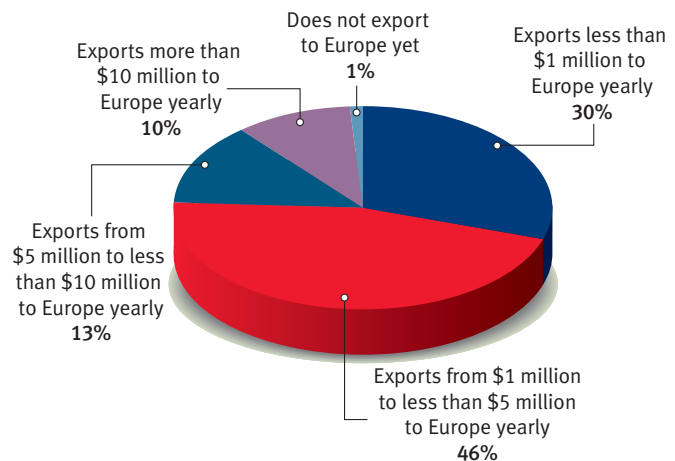

Since most surveyed Hong Kong makers ship components and consumer electronics devices worth more than \$5 million to Europe, they would not risk losing a major income-generator by not complying with the EU directive.

Ninety-eight percent of non-RoHS-compliant mainland China makers plan to beat the mid-2006 deadline, while the rest will comply after July 2006.

South Korea companies are also in the process of complying with the directive. Although less than 10 percent of the respondents are complying with the directive during the time of the interview, the remaining respondents will shift to RoHS compliant production in time for the mid-year deadline.

## EXPORT ORIENTATION OF RoHS-COMPLIANT RESPONDENTS

*What is the estimated value of your export to Europe in 2005?*

The pie chart shows that 140 manufacturers who export \$5 million or less per year comprise the bulk of RoHS-compliant manufacturers. Companies that export more than \$5 million to Europe yearly total 42.

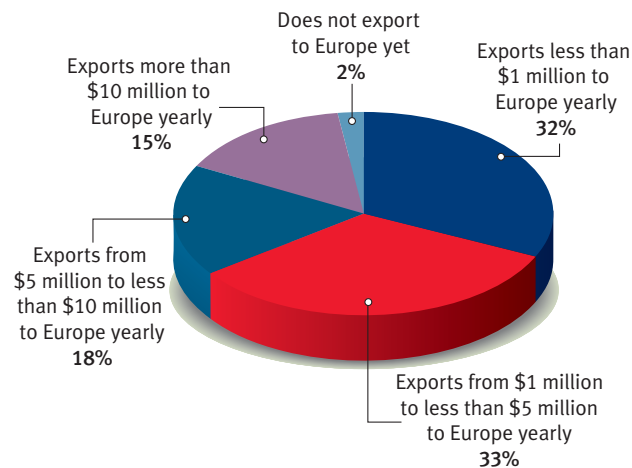

Small- to medium-scale manufacturers cater to niche markets in Europe, considerably lowering the risk of not getting an immediate return on their investments, and making it easier for them to comply with the RoHS directive.

Mainland China respondents have a compliance rate of 50 percent. About 84 percent of 32 Hong Kong respondents are already RoHS-compliant. Manufacturers from both regions export a large chunk of their production to Europe, and thus have a need for early compliance.

Also, 37 percent of more than 70 Taiwan companies and 9 percent of more than 32 respondents from South Korea already comply with the directive.

## EXPORT ORIENTATION OF NON-ROHS-COMPLIANT RESPONDENTS

*What is the estimated value of your export to Europe in 2005?*

Of the 171 manufacturers who said they are not yet compliant, 89 percent plan to comply by the end of June 2006. The pie chart shows that 65 percent of these manufacturers export less than \$5 million to Europe.

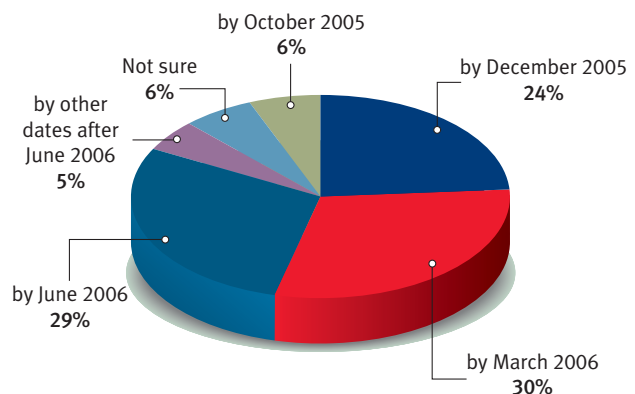

Based on the annual export value to Europe, about 50 percent of manufacturers that export less than \$1 million are not compliant. For those that export from \$1 million to less than \$5 million, only 40 percent are not compliant; while 58 percent of those that export more than \$5 million are not compliant.

In terms of numbers and percentages, it would seem that small- to medium-scale manufacturers were quicker in deciding to comply with the RoHS directive.

The good news for buyers in the EU is that 97.7 percent of the companies that are not compliant will eventually comply with the RoHS directive.

## COMPLIANCE PROGRAM OF NON-ROHS-READY MANUFACTURERS

*Is your company RoHS-compliant? If not yet, by what month will your company be RoHS-compliant?*

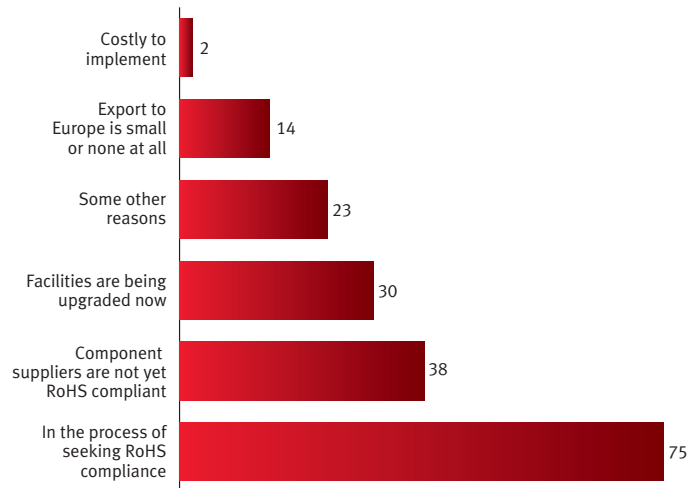

For non-compliant manufacturers who will eventually comply with the RoHS directive, the pie chart shows their program of implementation.

In terms of annual export value to Europe, 24 percent of those that export less than \$1 million plan to comply by year-end 2005, while 64 percent will try before the deadline. For those that export from \$1 million to less than \$5 million, 34 percent will try to comply by year-end 2005, while 57 percent will try before the deadline.

About 19 percent of companies that export from \$5 million to less than \$10 million expect to comply by year-end 2005, while 64 percent will try before the deadline. For those that export more than \$10 million, 46 percent plan to comply by year-end 2005, while another 46 percent will do so before the deadline.

REASONS FOR THE DELAY IN RoHS COMPLIANCE

*If your company is not yet RoHS-compliant, what are the reasons?*

The process of meeting the RoHS requirements involves upgrading manufacturing facilities or waiting for component suppliers to also become RoHS-compliant.

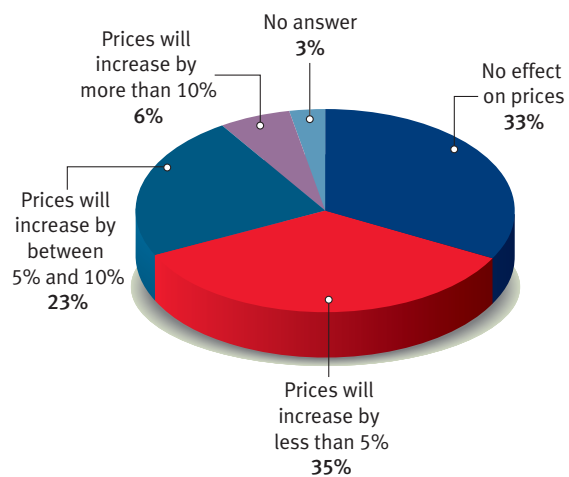

Only two manufacturers cited cost as a deterrent toward becoming RoHS-compliant. This may mean that for the majority of non-compliant manufacturers, not complying early with RoHS standards is a conscious decision.

Understandably, there are manufacturers who are not in a hurry to comply with the EU directive because the European market does not contribute significantly to their revenue.

## PRICING PERCEPTION OF THE INDUSTRY

*How will RoHS compliance affect your company's product prices?*

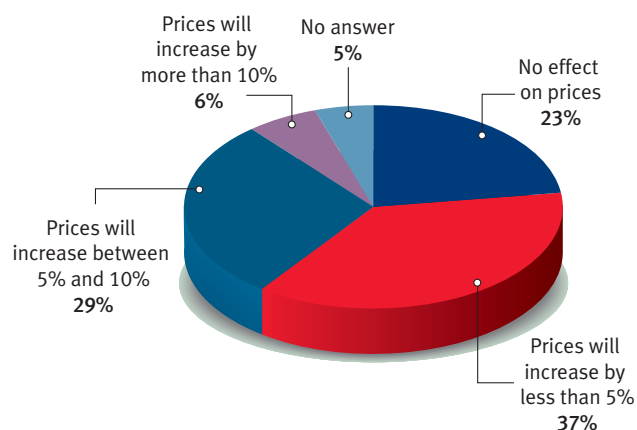

Industry experts have estimated that compliance with the RoHS directive will lead to a 10 percent rise in production cost, and a subsequent increase in product prices.

About 64 percent of respondents said that RoHS compliance will effect an increase in product prices as shown by the chart. What the chart does not show, however, is that where the export value increases, there is greater likelihood for prices to increase. This is probably because the thin profit margin at very high volumes is further diminished by the additional cost of complying with the directive.

Based on the annual value of export to Europe, 40.5 percent of manufacturers that export less than \$1 million said that RoHS compliance would not affect product prices. This view is shared by 33 percent of those that export from \$1 million to less than \$5 million; 26 percent of those that export from \$5 million to \$10 million; and 20 percent of those that export more than \$10 million.

### PRICING PERCEPTION OF COMPLIANT AND NON-COMPLIANT MANUFACTURERS

*How will RoHS compliance affect your company's product prices?*

Only 23 percent of non-compliant manufacturers said that RoHS implementation would have no effect on product prices, while 66 percent said that RoHS would increase product prices by up to 10 percent. The perception of non-compliant manufacturers is shown on the right.

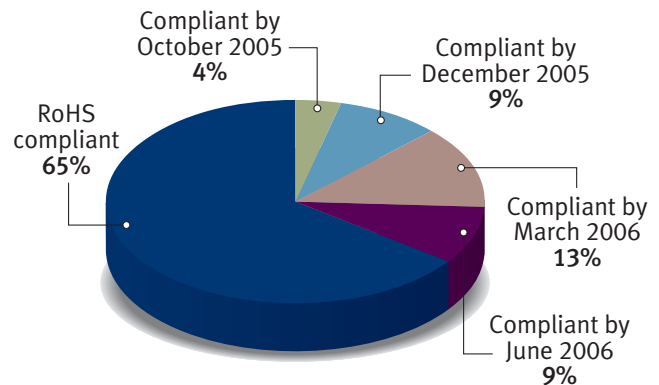

In contrast, 42 percent of compliant manufacturers said that RoHS did not have any effect on their product prices. Only about 50 percent said that their product prices have increased by as much as 10 percent because of RoHS.

Generally, though, the perception of non-compliant respondents is similar to that of compliant respondents.

## BATTERIES

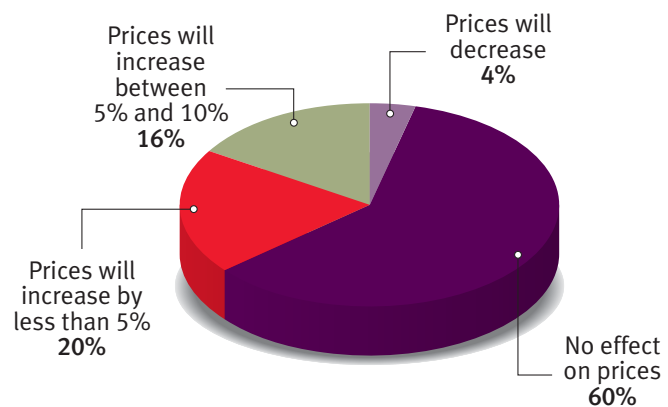

*Is your company RoHS-compliant? If not yet, by what month will your company be RoHS-compliant?*

Status of compliance

*How will RoHS compliance affect your company's product prices?*

Impact on prices

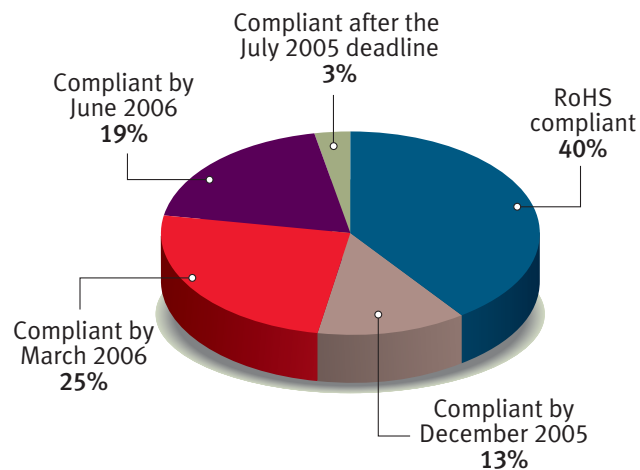

Most surveyed battery makers expect to maintain prices in the face of RoHS implementation, with only 36 percent expecting prices to increase upon implementation of the EU directive, and 4 percent anticipating prices to go down.

### CAR ELECTRONICS

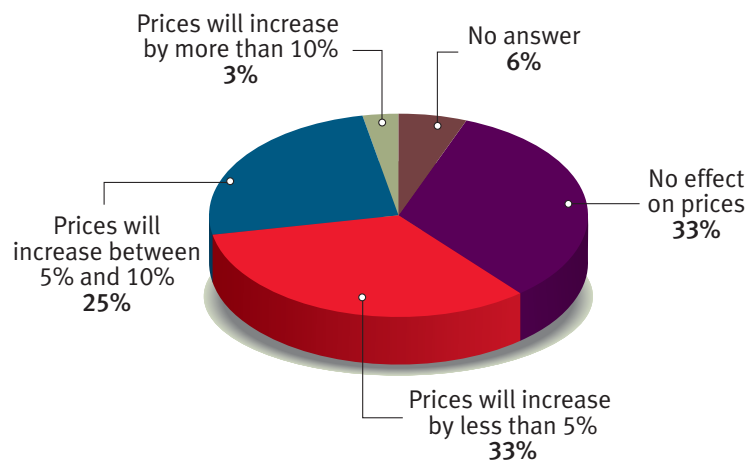

*Is your company RoHS-compliant? If not yet, by what month will your company be RoHS-compliant?*

Status of compliance

*How will RoHS compliance affect your company's product prices?*

Impact on prices

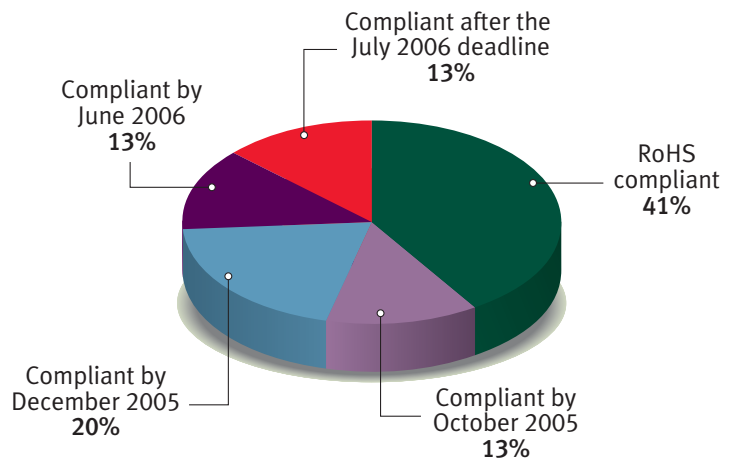

With respondents eyeing other major export regions such as North America and Asia, 66 percent of the car electronic makers believe that RoHS will only jack up prices by up to 5 percent.

## COLOR TVs

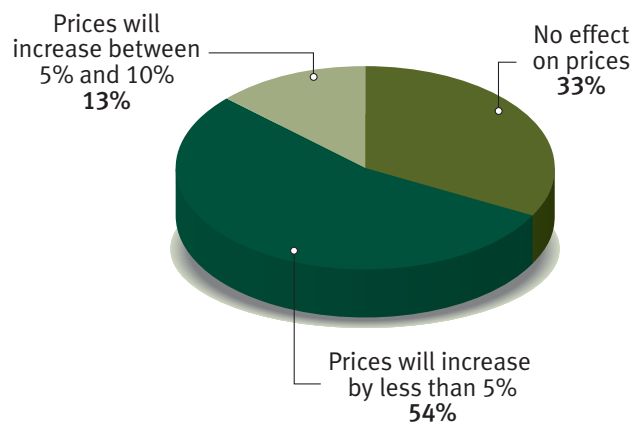

*Is your company RoHS-compliant? If not yet, by what month will your company be RoHS-compliant?*

Status of compliance

*How will RoHS compliance affect your company's product prices?*

Impact on prices

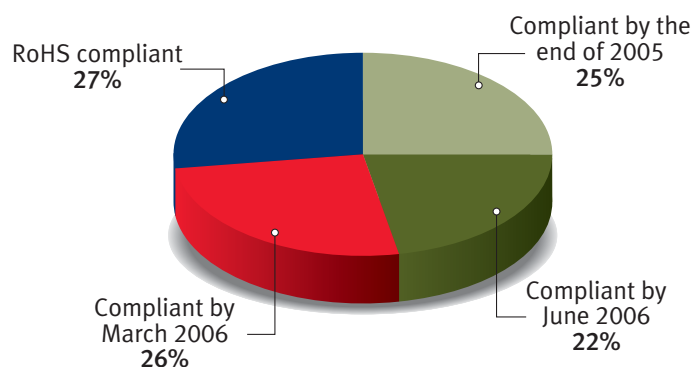

The majority of the respondents would have shifted to RoHS compliant production by the time the directive is implemented; 13 percent disclosed that they will comply after the deadline.

The decreasing cost of LCD panels and CRT monitors will have a counter effect on the cost of RoHS implementation. A less than 5-percent increase in prices will be the net effect.

### COMPUTER PERIPHERALS

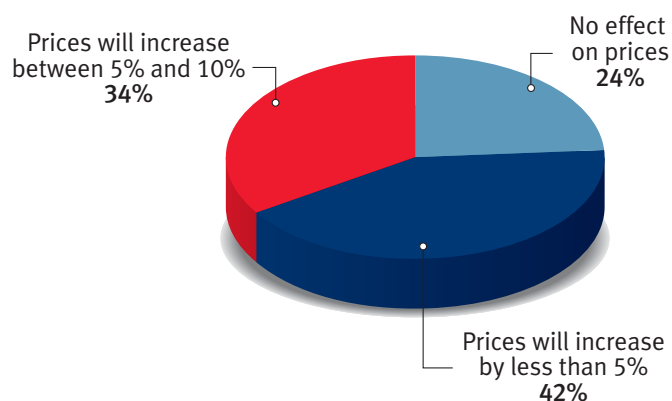

*Is your company RoHS-compliant? If not yet, by what month will your company be RoHS-compliant?*

Status of compliance

*How will RoHS compliance affect your company's product prices?*

Impact on prices

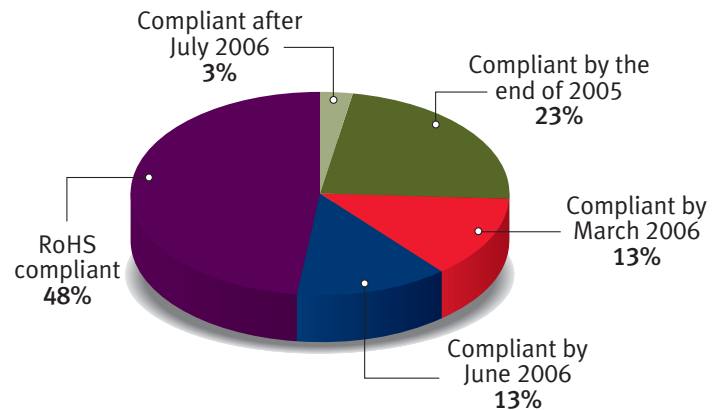

All of the surveyed makers of computer peripherals would have shifted to RoHS-compliant manufacturing by the time the RoHS directive takes effect. Computer peripheral makers are torn between raising prices and maintaining stable price quotes, primarily due to the increasing oil prices, and unstable supply and cost of LCD panels.

## COMPUTER SYSTEMS AND COMPONENTS

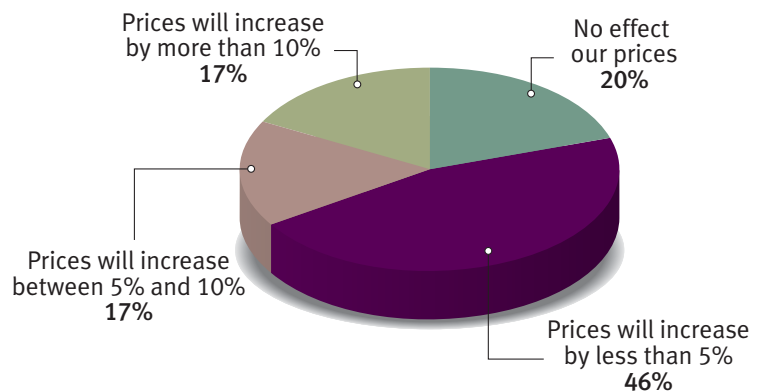

*Is your company RoHS-compliant? If not yet, by what month will your company be RoHS-compliant?*

Status of compliance

*How will RoHS compliance affect your company's product prices?*

Impact on prices

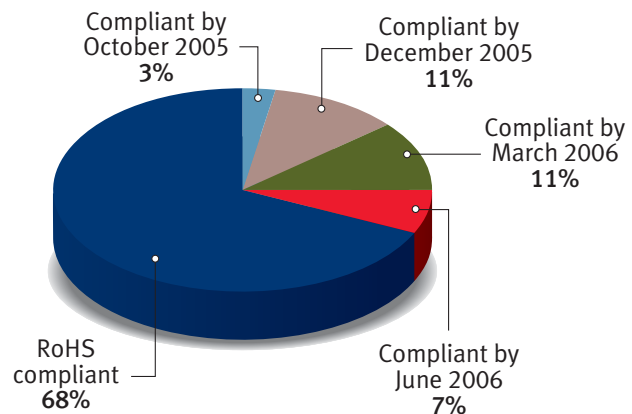

Most makers of hard disk drives, computer drives, computer cards and motherboards indicated they will increase prices by up to 10 percent as an effect of RoHS compliance. The rapidly growing computer replacement market in Europe is one other factor that limits the makers' price increases.

## CONNECTORS

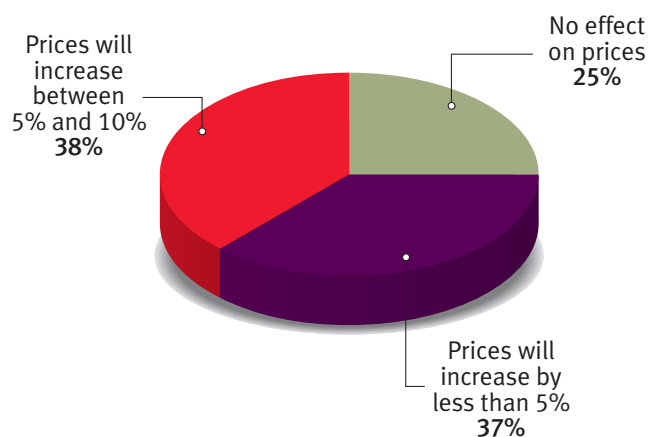

*Is your company RoHS-compliant? If not yet, by what month will your company be RoHS-compliant?*

Status of compliance

*How will RoHS compliance affect your company's product prices?*

Impact on prices

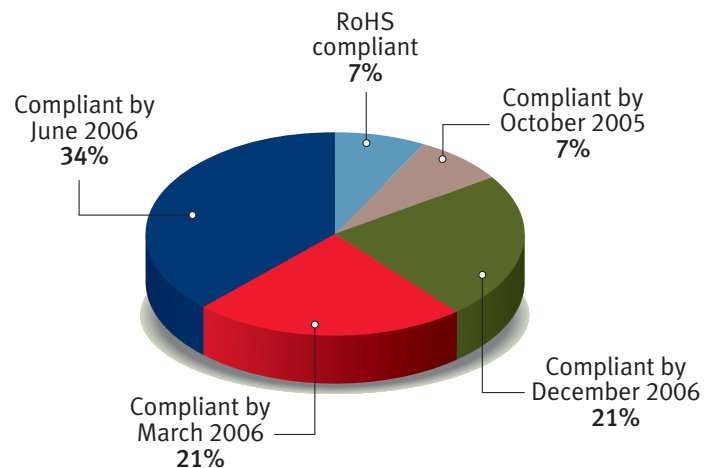

The majority of connector makers are already RoHS-compliant. Seventy-five percent of the respondents expect prices to increase by as much as 10 percent. The percentage of RoHS-compliant makers is expected to reach 82 percent by year-end 2005.

## ELECTRONIC SECURITY

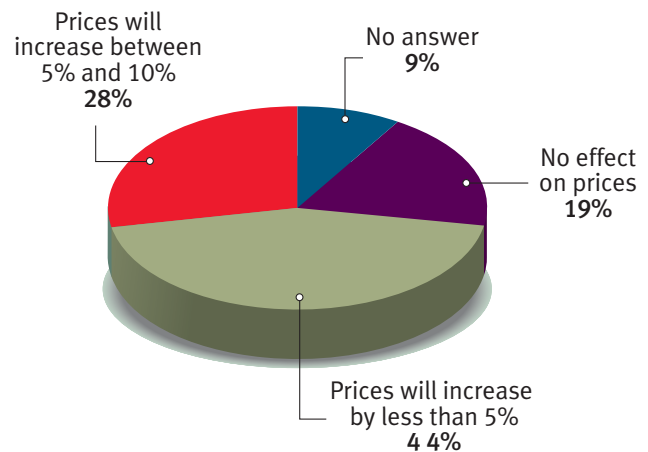

*Is your company RoHS-compliant? If not yet, by what month will your company be RoHS-compliant?*

Status of compliance

*How will RoHS compliance affect your company's product prices?*

Impact on prices

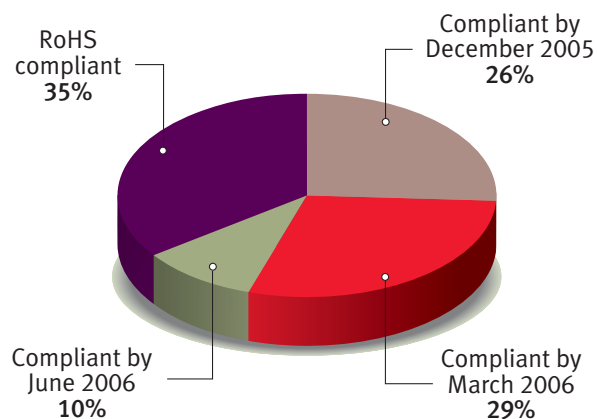

The majority of electronic security product makers are planning to increase the prices of their products because of RoHS compliance. Most of the non-compliant respondents will comply by the mid-2006 deadline as Europe is one of the line's major markets.

## HOME A/V PRODUCTS

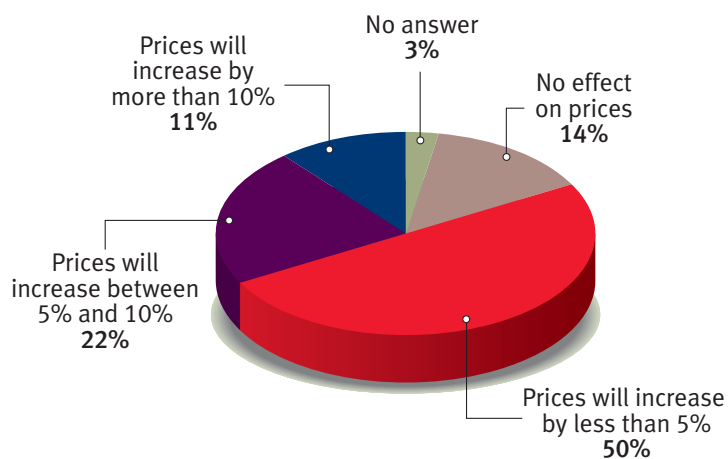

*Is your company RoHS-compliant? If not yet, by what month will your company be RoHS-compliant?*

Status of compliance

*How will RoHS compliance affect your company's product prices?*

Impact on prices

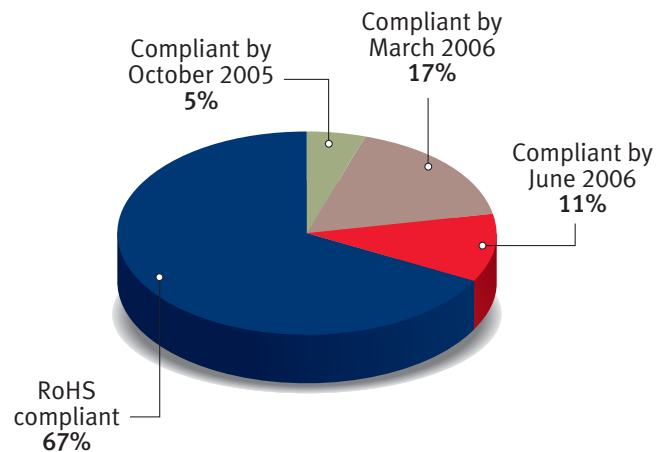

Since component costs are expected to increase because of RoHS compliance, 83 percent of home A/V product makers also expect the prices of their products to increase. Many makers in this segment say their compliance depends on their component suppliers becoming RoHS-ready.

## LEDs AND LED DISPLAYS

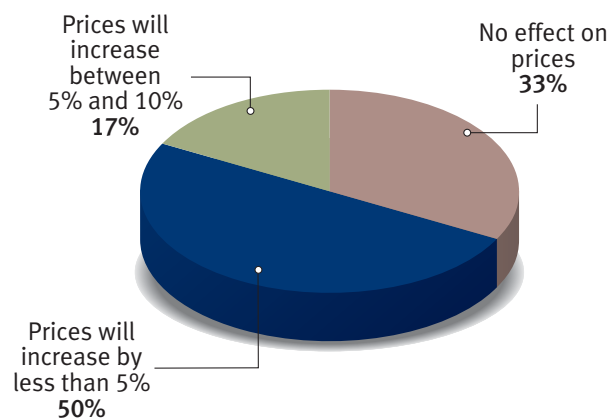

*Is your company RoHS-compliant? If not yet, by what month will your company be RoHS-compliant?*

Status of compliance

*How will RoHS compliance affect your company's product prices?*

Impact on prices

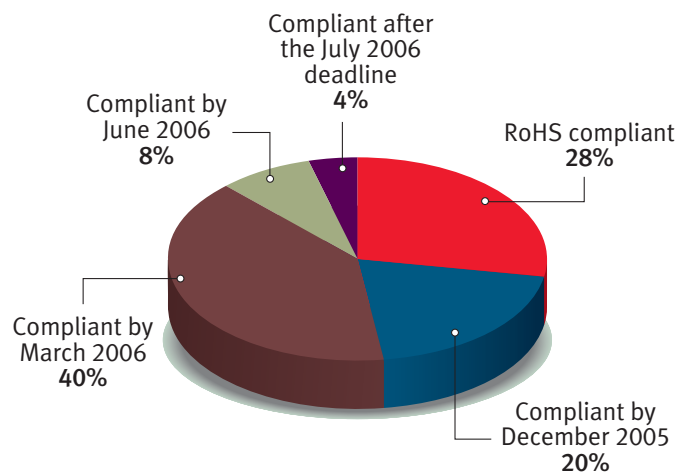

Sixty-seven percent of the surveyed LED and LED display makers expect RoHS compliance to drive up prices by as much as 10 percent. A 100-percent compliance is expected before July 1, 2006.

### MEDIA PLAYERS AND RECORDERS

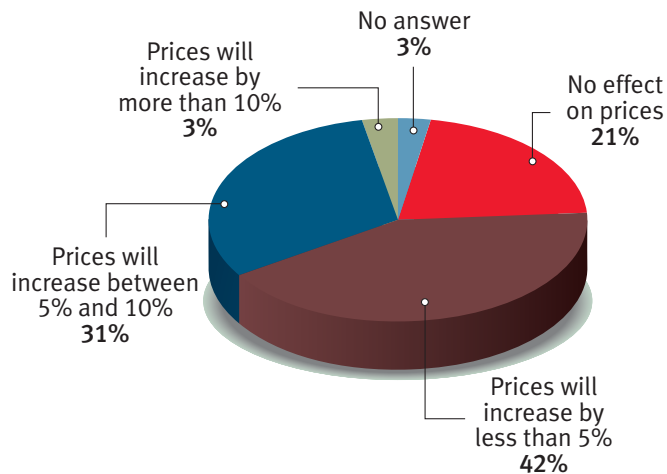

*Is your company RoHS-compliant? If not yet, by what month will your company be RoHS-compliant?*

Status of compliance

*How will RoHS compliance affect your company's product prices?*

Impact on prices

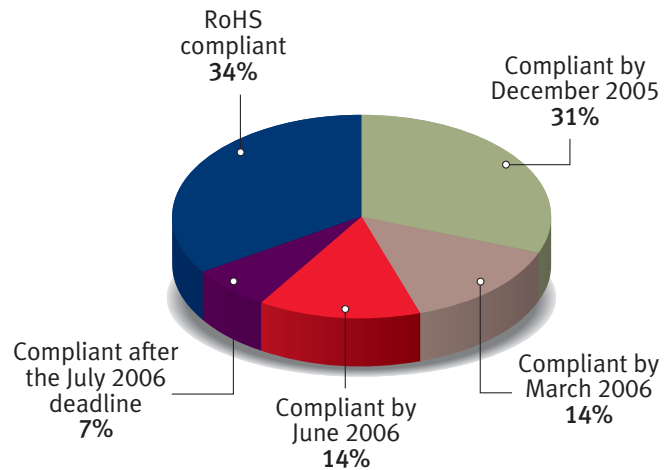

Makers of media players and recorders have other issues to deal with, such as IPR and licensing, aside from complying with RoHS standards. Seventy-six percent of makers said that they will increase their prices because of the directive.

## NETWORKING PRODUCTS

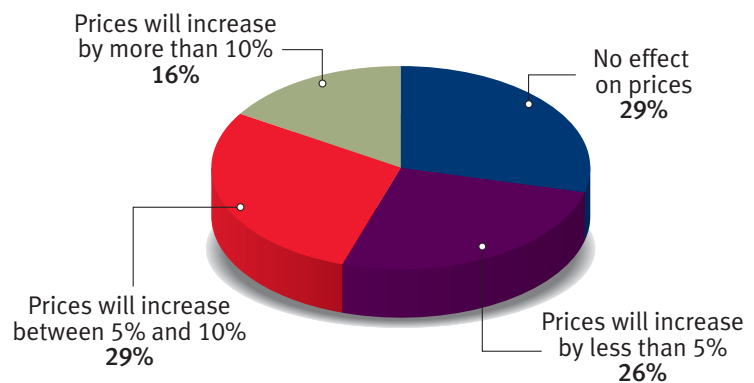

*Is your company RoHS-compliant? If not yet, by what month will your company be RoHS-compliant?*

Status of compliance

*How will RoHS compliance affect your company's product prices?*

Impact on prices

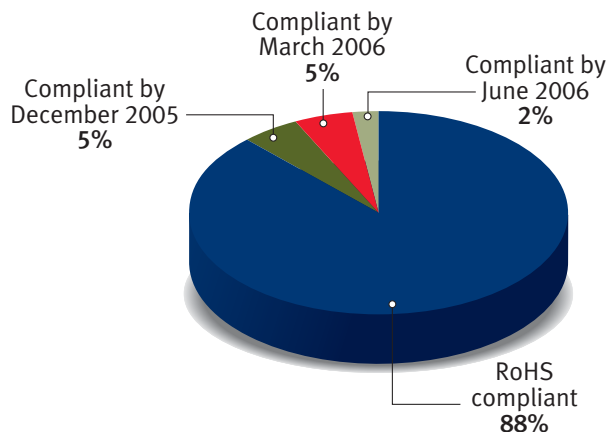

The availability of low-cost wireless IC solution from Taiwan and the increasing demand for wireless devices from the business and SOHO segments are enough for most wired and wireless networking device makers to maintain stable FOB prices, even after the implementation of the RoHS directive for all Europe-bound networking products.

### PASSIVE COMPONENTS

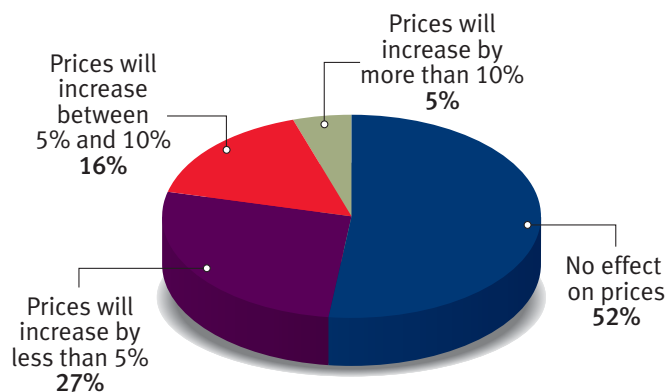

*Is your company RoHS-compliant? If not yet, by what month will your company be RoHS-compliant?*

Status of compliance

*How will RoHS compliance affect your company's product prices?*

Impact on prices

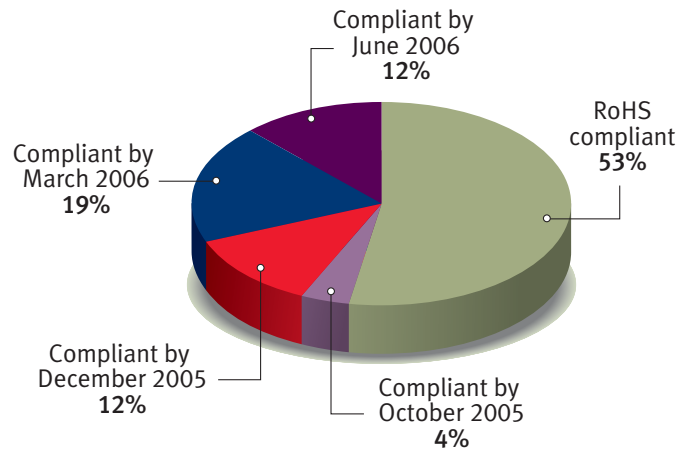

The majority of passive component manufacturers are already RoHS-compliant. As a result, more than half of the respondents—52 percent—said that the RoHS implementation will not affect their current product prices. Twenty-seven percent of the surveyed makers, meanwhile, said that the prices will increase minimally by up to 5 percent.

## PERSONAL ELECTRONIC DEVICES

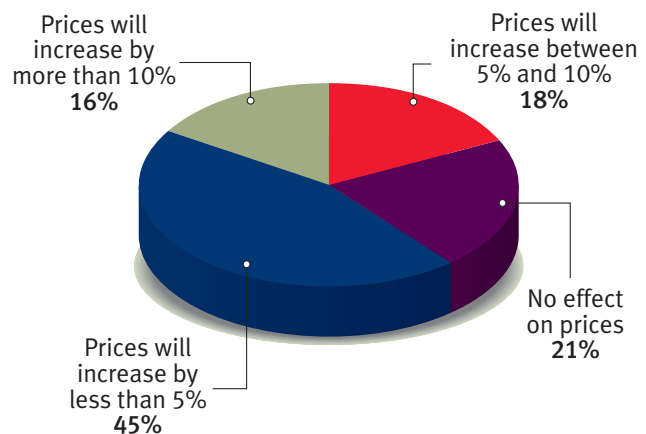

*Is your company RoHS-compliant? If not yet, by what month will your company be RoHS-compliant?*

Status of compliance

*How will RoHS compliance affect your company's product prices?*

Impact on prices

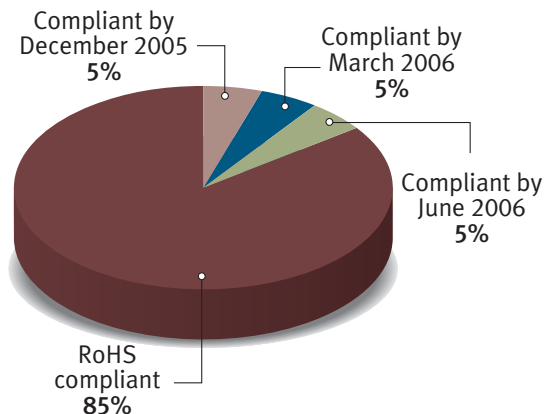

For the majority of makers of personal electronic products such as MP3 players, CD players, DVD players and multimedia players, prices will increase by up to 10 percent because of RoHS compliance. More than half of the respondents were already complying with the directive as of September 2005.

## PRINTED CIRCUIT BOARDS

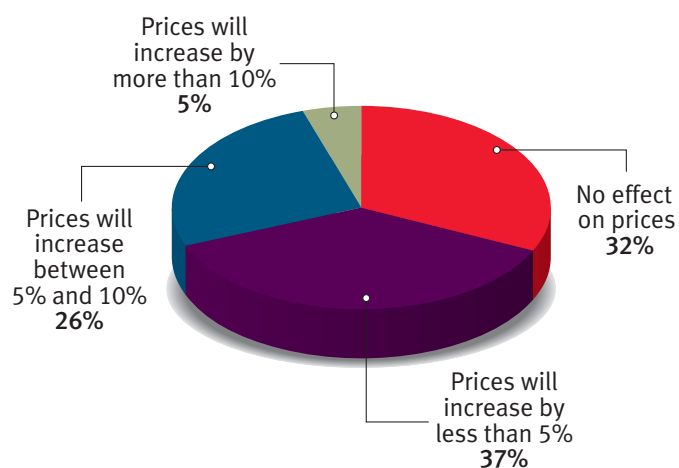

*Is your company RoHS-compliant? If not yet, by what month will your company be RoHS-compliant?*

Status of compliance

*How will RoHS compliance affect your company's product prices?*

Impact on prices

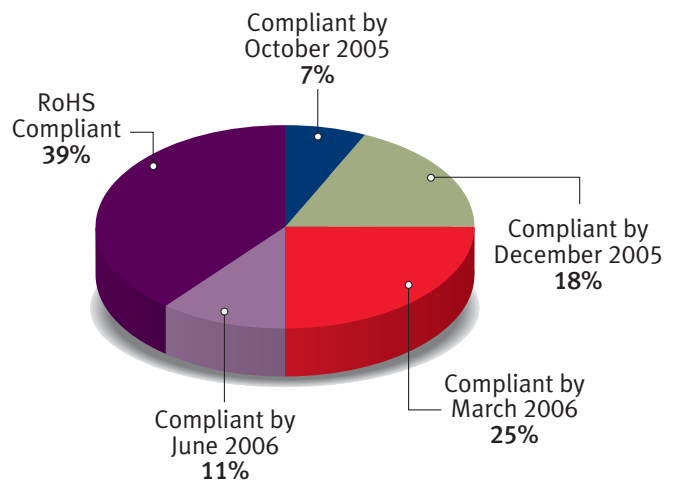

Thirty-seven percent of PCB makers who have forecast price increases are anticipating a price hike of less than 5 percent. Price hikes were attributed more to increasing raw material costs than to production costs, as 85 percent of surveyed makers were already RoHS compliant.

## TELECOM PRODUCTS

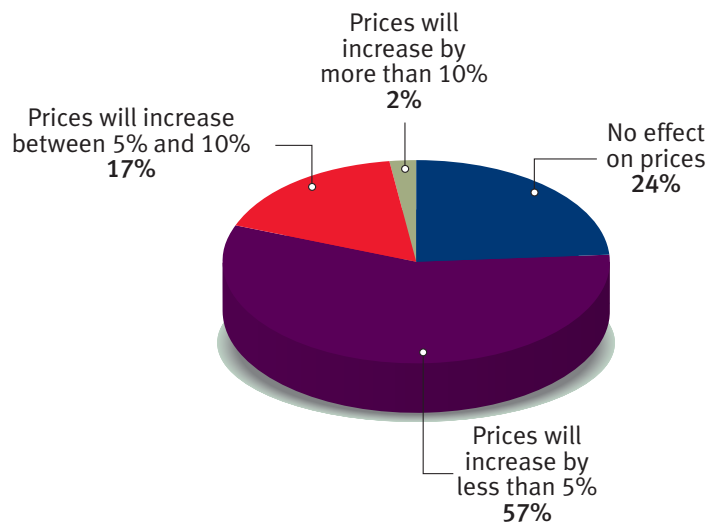

*Is your company RoHS-compliant? If not yet, by what month will your company be RoHS-compliant?*

Status of compliance

*How will RoHS compliance affect your company's product prices?*

Impact on prices

Thirty-nine percent of telecom product makers were on lead-free manufacturing as of September 2005.

The majority (57 percent) of cordless phones, VoIP, mobile phones, GPS and two-way radio makers forecast that RoHS-compliance may result in prices increasing by less than 5 percent.
